The Uninformed Election That Has
Become a Gateway to Chaos

Dr. Guy Hatchard

The Uninformed Election That Has Become a Gateway to Chaos

After three years of pandemic pandemonium that has all but destroyed the New Zealand we knew and loved, we are heading into an election with all the major parties omitting to discuss or even mention what happened and why. So what did happen?

You can listen to an [audio version of this article here](#).

Our health system has been all but destroyed:

It has become difficult to see a GP, with [wait times commonly up to four weeks](#). More than 50% of main centre health clinics are now closed to new patients.

EDs are overwhelmed with some ambulances [waiting on the ramp](#) for up to four hours with seriously ill patients on board, [Excess deaths are continuing at high levels](#), but politicians like David Seymour, hoping to govern our country for the next three years, are in denial.

The media is going along with stories of mismanagement and staff shortages, but they are failing to mention the fundamental cause—incidence of illness is up dramatically (see [heart disease up 83%](#), while strokes, cancers, stillbirths, etc. are also up). Why?

It is not hard to find confirmation if you are prepared to look for answers in published scientific literature and overseas reports.

A [meta-analysis](#) published in *Human Vaccines and Immunotherapeutics* on August 3rd has found a significant association between Covid vaccination and cardiac related deaths.

[Figures released by the Singapore Government](#) show a 51% decrease in live births and an increase in deaths.

A [study](#) published in *Obstetrics and Gynecology* July 14 2023 has found high levels of adverse outcomes among infants related to mRNA vaccine dose levels. [US VAERS data](#) confirms the risks of miscarriage and stillbirth are high following Covid vaccination.

The Uninformed Election That Has Become a Gateway to Chaos

Clare Craig, former NHS pathologist, [reports](#) that Covid deaths are continuing at elevated levels in highly vaccinated countries, but have fallen to almost zero in countries with low vaccination rates.

[Rates of sudden cardiac death](#) among younger persons continue to rise. A [report](#) in the journal *Vaccine: X* indicates that vaccine-induced myocarditis cases can relapse months after apparent initial recovery.

These are just a few among hundreds of reports surfacing overseas and in scientific literature that are being completely ignored by the New Zealand media and elected politicians. In Australia and some other countries, as we have been reporting, [the high rate of vaccine injury](#) has just become a topic that can be openly discussed. See [here](#) for comments from medical professionals concerning some of these injuries. The silence in New Zealand is deafening.

Just think what this means for our future. Those standing for election among the major parties are:

- Happy to tolerate manipulation of media content
- Unable to learn vital lessons from the failures of pandemic policy
- Mindlessly swallowing excuses offered by those to blame for deaths, including themselves
- Unable to press the emergency button as people die in unprecedented numbers (and it is not from Covid)
- Unable to grasp the risks of biotechnology experimentation

The facile policies on offer from the major parties are mind numbing in their naivety. The National Party and ACT want to deregulate biotechnology because they say it will boost the economy and health of the nation. Do they even read the newspapers? Read this tale of woe in today's UK Guardian headlined "[Sales at vegan burger maker Beyond Meat fall by almost a third](#)".

Consumers don't want biotech food, they can't afford it, and they don't trust it for good reasons. It isn't even profitable. Biotech food companies riding high on an investment bubble a couple of years ago are now worth pennies in the dollar. Many are even going bankrupt. Consumers are apparently asking questions and preferring safe, natural ingredients like chickpeas, a preference the failing biotech food companies ludicrously describe as the work of special *'interest groups'*.

The Uninformed Election That Has Become a Gateway to Chaos

Biotechnology experimentation is not safe, but it is proliferating with government encouragement. Even with the best intentions, accidents occur. See this [report](#) on possible unsafe testing labs in New Zealand handling typhoid bacteria. This is just an inkling of what might happen if the industry is deregulated as National and ACT are suggesting. In the USA, lack of regulation has led to the proliferation of unsafe labs handling deadly pathogens. Moreover, much of the work being undertaken is so highly dangerous it could wipe out mankind.

Of gain of function research, Kevin M. Esvelt, an evolutionary and ecological engineer at MIT, [wrote](#) in a 2021 opinion piece: *"I implore every scientist, funder, and nation working in this field: Please stop."* Purposefully creating a pathogen that could wipe out millions of people—regardless of its hoped-for benefit—is *"insanity,"* global security and biodefense expert Dr. Laura Kahn told the author of a comprehensive [article](#) covering the topic.

Contrast this with the dangerous drivel being spoon fed to the New Zealand public in support of crazy biotech experimentation. Last week Jesse Mulligan featured a [podcast](#) with an American English teacher (???) Ted Anton. Together these two poorly informed influencers manage to describe genetic modification as similar to, and as safe as, making cheese or jam or home. They promised us a bright economic future and a giant evolutionary leap that can be engineered as simply as driving a car. I could go on—the inaccuracies and unsubstantiated wild claims in this podcast include working cures for cancer based on synthetic biology—they don't exist, but we won't know it if we trust Jesse Mulligan for medical advice—we shouldn't.

From a published science perspective this is laughable and would remain so if it wasn't for the fact that our politicians appear to be basing their projected policies on similar levels of misinformation. They are planning to lead us into an entirely imaginary dazzling biotech future. At the same time they are refusing to discuss the adverse events that actually happened on an unprecedented scale during the pandemic, and are still happening.

This schizophrenic juxtaposition of events is coming to an election booth near you.

If you are planning to vote for one of the currently elected parties and think that will change things, think again. Unfortunately, there is only one political party, with a chance of being elected, currently discussing the outcomes of the pandemic and planning to hold an independent inquiry, and that is NZ First. Whether we like it or not, that is the stark reality we face. Each of us will make up our own mind and that is everyone's right. Personally, I am planning to vote for Winston. All the other parties currently registering in the polls appear ready and eager to lead us further down the dangerous, unhealthy, chaotic pandemic path we traversed.

Government officials have warned that [NZ faces a bleak future](#). If Labour, the Greens, the Maori Party, ACT, or National get in, I agree. They all played their role in pandemic policies, roles they appear eager to hide and forget. So I leave you with this thought: the authoritative Washington Post has noticed that society is falling apart. [According to the Post](#), people have forgotten how to behave in social situations like going to the movies, attending theatres, meeting friends or even flying on a plane saying:

“Nobody’s quite figured out where everyone’s good manners have gone — and what is exactly causing the current collapse in civility.”

Now I wonder what might have caused that? When we mark our ballot paper, let's not make the next three years worse.
